

ABSTRACT

Method for Application of oxygen to the scalp from cosmetic shampoo with pH adjusted between 8.0 and 11.0 and hair conditioning cream containing from 1.0% to 4.0% hydrogen peroxide. The shampoo first used is not completely rinsed leaving the pH of the scalp between 8.0 and 11.0. The hydrogen peroxide containing cream rinse is then applied to the scalp and hair and left on the hair for at least one minute. Pure oxygen is released directly into the scalp supporting the health of the hair and scalp.
